

Job Description

Job title:	Software Developer (Full Stack)
Employment Type:	Permanent
Reporting to:	Technical Leader
Department:	Cirrus Logistics
Working hours:	40 hours per week – 09:00 – 17:30, Monday to Friday
Location:	Basingstoke office, RG24 8WD

Description of Role

Cirrus Logistics is a global company that specialises in providing decision support solutions to corporations in both the supply chain and maritime industries. They supply software and services that utilise advanced optimisation and simulation techniques to enable companies to develop the best possible business strategies that deliver optimum financial benefits.

The main products developed by Cirrus are:

- CLASS, the leading warehouse design & simulation tool;
- MES, an operational Berth Scheduling & Strategic Planning Tool used in ports around the world;
- COST2SERV, a network optimisation tool used by major oil companies.

As well as the main products Cirrus develops smaller bespoke solutions to solve specific customer challenges.

Initially the role will focus on 100% software development. As the individual progresses, the role may additionally involve capturing business requirements, mentoring other development team members and getting involved in sales support. Our product portfolio provides ample opportunity for you to use your creative and problem solving skills within a stimulating working environment.

Our products are primarily developed using the C#.NET platform and JavaScript frameworks.

Whilst these roles are primarily focussed on development, career opportunities will be available to further develop your capabilities in other business areas.

Main Responsibilities:

- Development of new core product functionality
- Design of self-contained areas of the product
- Functional testing of own code, and associated bug-fixing
- Creation of high quality technical documentation
- Maintenance of the product and technical support

There is also an out of hours support rota, providing 1st to 3rd line support for our operational products which would result in additional payments.

Skills & Competencies:

- JavaScript frameworks (such as Angular/React)
- C#
- Unit testing
- CSS/HTML
- Strong communication skills
- Effective team worker
- Excellent problem solving skills
- Self-motivation and enthusiasm
